

Why add Librium® (chlordiazepoxide HCl) to your cardiovascular regimen?

Excessive anxiety in susceptible patients can set in motion a chain of responses which add to the heart's work and thereby increase the possibility of cardiovascular complications. Furthermore, intense anxiety may interfere with effective medical management since some patients, in an attempt to deny their illness, may resist acceptance of necessary medication, dietary restrictions and other therapeutic directives. When counseling and reassurance alone are inadequate to

relieve undue anxiety, adjunctive Librium (chlordiazepoxide HCl) may be beneficial.

**"Specific" for anxiety reduction...
wide margin of safety**

Librium is used as an adjunct to primary cardiovascular medications, since it acts directly on the central nervous system, reducing excessive anxiety and emotional tension. In so doing, Librium indirectly affects cardiovascular function.

Librium has a high degree of antianxiety effectiveness with a wide margin of safety. In proper dosage, Librium usually helps calm the overanxious patient without unduly interfering with mental acuity or general performance. In the elderly and debilitated, the initial dosage is 5 mg *b.i.d.* or less to preclude ataxia or oversedation, in-

creasing gradually as needed and tolerated.

Librium is used concomitantly with certain specific medications of other classes of drugs, such as cardiac glycosides, diuretics, antihypertensive agents, vasodilators and anticoagulants. Although clinical studies have not established a cause and effect relationship, physicians should be aware that variable effects on blood coagulation have been reported very rarely in patients receiving oral anticoagulants and Librium. After anxiety has been reduced to tolerable levels, Librium therapy should be discontinued.

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Relief of anxiety and tension occurring alone or accompanying various disease states.

Contraindications: Patients with known hypersensitivity to the drug.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. As with all CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). Though physical and psychological dependence have rarely been reported on recommended doses, use caution in administering to addiction-prone individuals or those who might increase dosage; withdrawal symptoms (including convulsions), following discontinuation of the drug and similar to those seen with barbiturates, have been reported. Use of any drug in pregnancy, lactation, or in women of childbearing age requires that its potential benefits be weighed against its possible hazards.

Precautions: In the elderly and debilitated, and in children over six, limit to smallest effective dosage (initially 10 mg or less per day) to preclude ataxia or over-sedation, increasing gradually as needed and tolerated. Not recommended in children under six. Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider individual pharmacologic effects, particularly in use of potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients and hyperactive aggressive children. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: Drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are reversible in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally, making periodic blood counts and liver function tests advisable during protracted therapy.

Supplied: Librium® Capsules containing 5 mg, 10 mg or 25 mg chlordiazepoxide HCl. Libritabs® Tablets containing 5 mg, 10 mg or 25 mg chlordiazepoxide.

**For relief of excessive anxiety
adjunctive**

Librium® 10 mg
(chlordiazepoxide HCl)
1 or 2 capsules t.i.d./q.i.d.

Roche Laboratories
Division of Hoffmann-La Roche Inc.
Nutley, New Jersey 07110

Wells Fargo announces an investment vehicle with a guaranteed return and major tax advantage for people who are self-employed.

Before December 31st—you can invest \$1,000 to \$7,500 in a new Wells Fargo tax-deferred savings plan that pays you a guaranteed 7.25% annual interest from 4 years to retirement.

Under the terms of the Pension Reform Act, the laws governing Keogh Plans have been liberalized to permit higher annual contributions. This, coupled with the high yield available through today's bank deposit instruments, make such a plan more attractive than ever before. Since the new Wells Fargo plan is based on deposit certificates, you avoid the peaks and valleys associated with other forms of investment. In addition, your investment is insured by the Federal Deposit Insurance Corporation. If you're now part of a securities-based plan, you may well want to consider transferring to this plan.

As part of this plan, your investment and all interest earned is tax-deferred until your retirement.

This means that you can not only deduct your initial contribution when filing your April income tax return, but also defer tax payment on that amount as well as the interest earned until your retirement. Federal law and regulation prohibit the payment of a time deposit prior to maturity unless three months of the interest thereon is

forfeited and interest on the amount withdrawn is reduced to the passbook rate.

For full details, mail in the coupon below, or call Wells Fargo's Pension Trust Department at (415) 396-3306 in Northern California or (213) 683-7058 in Southern California.

Bio-Science Reports

TSH by RIA at BSL

Bio-Science Laboratories adds still another valuable laboratory aid for the diagnosis of thyroid disorders: serum Thyroid Stimulating Hormone (TSH) by radioimmunoassay (RIA). The exquisite sensitivity of the RIA technic permits the detection of normal levels of TSH, which have been reported to average about 4.0 microunits/ml with a range of "non-detectable to 10 microunits/ml" (Hershman, J. M. and Pittman, J. A., New Eng. J. Med. 285:997, 1971).

The RIA method for TSH was pioneered by Utiger and Odell *et al.* in 1965. We are employing Hershman's modification of this method. Hershman and Pittman have reviewed the utility of the RIA of serum TSH in man (Annals Intern. Med. 74:481, 1971) and have emphasized its usefulness both for establishing the diagnosis of primary hypothyroidism and for differentiating it from hypothyroidism secondary to hypopituitarism. TSH levels above normal are strongly suggestive of the existence of primary hypothyroidism and may in fact be the most sensitive index of this disease.

Quotable Quotes

FOLATE:

"... the results support the suggestion that red cell folate provides a better assessment of folate status than does serum folate." (J. Clin. Path. 22:212, 1969).

"... serum folate assay is a valuable routine test in patients who have a macrocytic anaemia and low serum vitamin B₁₂." (J. Clin. Path. 24:244, 1971).

Note: We offer both serum and red cell folate measurements. As a matter of fact, if you order a red cell folate, our report includes both serum and red cell values.

RUBELLA:

"HAI (hemagglutination inhibition) antibodies are the first to be detectable, around 12-15 days after exposure; they rise rapidly and reach peak titers within one to three weeks . . . , and the CF response is delayed 10-14 days after onset, with maximal titers being attained after three or four weeks." (J. Infect. Diseases 123:640, 1971).

More New Tests at Your Service

Some of the newer tests currently available from Bio-Science Laboratories are listed below:

- Amebic (*E. histolytica*) antibodies
- Aldosterone by RIA
- Anti-DNA antibodies
- Complement decay rate
- Cyclic AMP by RIA
- Digoxin or digitoxin in serum, by RIA
- Estradiol by RIA
- Gamma glutamyl transpeptidase
- Gastrin by RIA
- Hemoglobin S, screening
- Histidine
- Human somatomammotropin (Human placental lactogen)
- Lecithin: sphingomyelin ratio in amniotic fluid
- Measles antibody by CF
- Mumps antibody detection
- Parathyroid hormone by RIA
- Phenotyping of Lipoproteins: Indirect confirmation of II, III, IV
- Red cell enzyme screening
- Renin, by RIA or bioassay
- Thyroid microsomal antibody
- TSH by RIA
- T₃ level in serum by RIA
- Vitamin E (α -tocopherol)

FREE HANDBOOK OF SPECIALIZED DIAGNOSTIC LABORATORY TESTS

This 200-page book, now in its tenth edition, is a uniquely informative source to keep you up-to-date on the newer laboratory tests, such as serum TSH, available to clinicians. You will find it a handy reference guide for normal values and quick summations on tests which can aid in your diagnostic problems. Copies are available to physicians and lab personnel without obligation. Simply fill out and mail this coupon.

The Role of the Detail Man

"I may be prejudiced, but I am very much in favor of the detail men I meet. Most of them are knowledgeable about the drugs they promote and can be a great help in acquainting me with new medication."

Family Physician's Perception

I think that most general practitioners in this area feel as I do about the detail man. Over the years I have gotten to know most of the men who visit me regularly and they in turn have become aware of my particular interests and the nature of my practice. They, therefore, limit their discussion as much as possible to the areas of interest to me. Since I usually see the same representative again in future visits, it is in his best interest to supply me with the most honest, factual, as well as up-to-date information about his products.

Dr. Willard Gobbell
Family Physician
Encino, California

Dr. Jeremiah Stamler
Chairman
Department of Community
Health and Preventive
Medicine, and Dingman
Professor of Cardiology
Northwestern University
Medical School

"In the total picture of dealing with health problems in this country, there is a potential for detail men to play a meaningful role."

The Positive Influence

My contact with representatives and salesmen of the pharmaceutical industry is the type of contact that people in a medical center, research people, and academic people have and that's in all likelihood on a somewhat different level from that of the practicing physician.

Let me touch on how I personally perceive the role of the sales representative. These men reach large numbers of health professionals. Thus they could be—and at times actually are—disseminators of useful information. They could consistently serve a real educational function in their ability to discuss their products.

At present they do distribute printed material, brochures and pamphlets—some of it scientifically sound and therefore truly useful—as well as some excellent films produced by the pharmaceutical industry. When they function in this

Opinion
&
Dialogue

Is He a Source of Information?

Yes, with certain reservations. The average sales representative has a great fund of information about the drug products he is responsible for. He is usually able to answer most questions fully and intelligently. He can also supply reprints of articles that contain a great deal of information. Here, too, I exercise some caution. I usually accept most of the statements and opinions that I find in the papers and studies which come from the larger teaching facilities. It goes without saying that a physician should also rely on other sources for his information on pharmacology.

Training of Sales Representatives

Ideally, a candidate for the position as a sales representative of a pharmaceutical company should be a graduate pharmacist who has a questioning mind. I don't think this is possible in every case, and so it becomes the responsibility

of the pharmaceutical company to train these individuals comprehensively. It is of very great importance that the detail man's knowledge of the product he represents be constantly reviewed as well as updated. This phase of the sales representative's education should be a major responsibility of the medical department of the pharmaceutical company.

I am certain that most of these companies take special care to give their detail men a great deal of information about the products they produce—information about indications, contraindications, side effects and precautions. Yet, although most of the detail men are well informed, some, unfortunately, are not. It might be helpful if sales representatives were reassessed every few years to determine whether or not they are able to fulfill their important function. Incidentally, I feel the same way about periodic assessments of everyone

in the health care field, whether they be general practitioners, surgeons or salesmen.

Value of Sampling

I personally am in favor of limited sampling. I do not use sampling in order to perform clinical testing of a drug. I feel that drug testing should rightly be left to the pharmacology researcher and to the large teaching institutions where such testing can be done in a controlled environment.

I do not use samples as a "starter dose" for my patients. I do, however, find samples of drugs to be of value in that they permit me to see what the particular medication looks like. I get to see the various forms of the particular medication at first hand, and if it is in a liquid form I take the time to taste it. In that way I am able to give my patients more complete information about the particular medications that I prescribe for them.

capacity they are indeed useful; particularly in the fact that they disseminate broadly based educational material and serve not just as "pushers" of their drugs.

The Other Side of the Coin

Obviously, the pharmaceutical companies are not producing all this material as a labor of love—they are in the business of selling products for profit. In this regard the ambitious and improperly motivated sales representative can exert a negative influence on the practicing physician, both by presenting a one-sided picture of his product, and by encouraging the practitioner to depend too heavily on drugs for his total therapy. In these ways, the salesman has often distorted objective reality and undermined his potential role as an educator.

The Industry Responsibility

Since the detail man must be an information resource as well as a representative of his particular pharmaceutical company, he should be carefully selected and

thoroughly trained. That training, perforce, must be an ongoing one. There must be a continuing battle within and with the pharmaceutical industry for high quality not only in the selection and training of its sales representatives, but also in the development of all of its promotional and educational material.

The industry must be ready to accept constructive as well as corrective criticism from experts in the field and consumer spokesmen, and be willing to accept independent peer review. The better educated and prepared the salesman is, the more medically accurate his materials, the better off the pharmaceutical industry, health professionals and the public—i.e., the patients—will be.

Physician Responsibility

The practicing physician is in constant need of up-dated information on therapeutics, including drugs. He should and does make use of drug information and answers to specific questions supplied by the pharmaceutical representative. However, that informa-

tion must not be his main source of continuing education. The practitioner must keep up with what is current by making use of scientific journals, refresher courses, and information received at scientific meetings.

The practicing physician not only has the right, but has the responsibility to demand that the pharmaceutical company and its representatives supply a high level of valid and useful information. I feel certain that if such a high level is demanded by the physician as well as the public, this demand will be met by an alert and concerned pharmaceutical industry.

From my experience, my impression is that sectors of the pharmaceutical industry are indeed ethical. I challenge the industry as a whole to live up to that word in its finest sense.

IN GONORRHEA

INJECTION

Wycillin®

(STERILE PROCAINE PENICILLIN G SUSPENSION) WYETH

Gonorrhea, according to the national Center for Disease Control, is, if the parenteral route is chosen, most effectively treated with aqueous procaine penicillin G. In uncomplicated cases, administration of 4.8 million units together with 1 gram oral probenecid, given at least 30 minutes prior to injection, is recommended.

Indications: In treatment of moderately severe infections due to penicillin G-sensitive microorganisms sensitive to the low and persistent serum levels common to this particular dosage form. Therapy should be guided by bacteriological studies (including sensitivity tests) and by clinical response.

NOTE: When high sustained serum levels are required use aqueous penicillin G, IM or IV.

The following infection will usually respond to adequate dosages of intramuscular procaine penicillin G.—*N. gonorrhoeae*: acute and chronic (without bacteremia).

FOR DEEP INTRAMUSCULAR INJECTION ONLY.

Contraindications: Previous hypersensitivity reaction to any penicillin.

Warnings: Serious and occasionally fatal hypersensitivity (anaphylactoid) reactions have been reported in patients on penicillin therapy.

Serious anaphylactoid reactions require immediate emergency treatment with epinephrine. Oxygen and intravenous corticosteroids should also be administered as indicated.

Although anaphylaxis is more frequent following parenteral therapy it has occurred in patients on oral penicillins. These reactions are more apt to occur in individuals with a history of sensitivity to multiple allergens.

There have been well documented reports of individuals with a history of penicillin hypersensitivity reactions who have experienced severe hypersensitivity reactions when treated with a cephalosporin. Before therapy with a penicillin, careful inquiry should be made concerning previous hypersensitivity reactions to penicillins, cephalosporins, and other allergens. If an allergic reaction occurs, the drug should be discontinued and the patient treated with the usual agents e.g., pressor amines, antihistamines and corticosteroids.

Precautions: Use cautiously in individuals with histories of significant allergies and/or asthma.

Carefully avoid intravenous or intraarterial use, or injection into or near major peripheral nerves or blood vessels, since such injections may produce neurovascular damage.

A small percentage of patients are sensitive to procaine. If there is a history of sensitivity, make the usual test: Inject intradermally 0.1 cc. of a 1 to 2 percent procaine solution. Development of an erythema, wheal, flare or eruption indicates procaine sensitivity. Sensitivity should be treated by the usual methods,

including barbiturates, and procaine penicillin preparations should not be used. Antihistaminics appear beneficial in treatment of procaine reaction.

The use of antibiotics may result in overgrowth of nonsusceptible organisms. Constant observation of the patient is essential. If new infections due to bacteria or fungi appear during therapy, discontinue penicillin and take appropriate measures.

If allergic reaction occurs, withdraw penicillin unless, in the opinion of the physician, the condition being treated is life threatening and amenable only to penicillin therapy.

When treating gonococcal infections with suspected primary or secondary syphilis, perform proper diagnostic procedures, including darkfield examinations. In all cases in which concomitant syphilis is suspected, perform monthly serological tests for at least four months.

Adverse Reactions: (Penicillin has significant index of sensitization) skin rashes, ranging from maculopapular eruptions to exfoliative dermatitis; urticaria; serum sickness-like reactions, including chills, fever, edema, arthralgia and prostration. Severe and often fatal anaphylaxis has been reported. (See "Warnings.")

As with other antisypilitics, Jarisch-Herxheimer reaction has been reported.

Administration and Dosage: Administer only by deep intramuscular injection, in upper outer quadrant of buttock. In infants and small children, midlateral aspect of thigh may be preferable. When doses are repeated, vary injection site. Before injection, aspirate to be sure needle bevel is not in blood vessel. If blood appears, remove needle and inject in another site.

Although some isolates of *Neisseria gonorrhoeae* have decreased susceptibility to penicillin, this resistance is relative, not absolute, and penicillin in large doses remains the drug of choice. Physicians are cautioned not to use less than recommended doses.

Gonorrheal infections (uncomplicated)—Men or Women: 4.8 million units intramuscularly divided into at least two doses and injected at different sites at one visit, together with 1 gram of oral probenecid, preferably given at least 30 minutes prior to injection.

NOTE: Treatment of severe complications of gonorrhea should be individualized using large amounts of short-acting penicillin. Gonorrheal endocarditis should be treated intensively with aqueous penicillin G. Prophylactic or epidemiologic treatment for gonorrhea (male and female) is accomplished with same treatment schedules as for uncomplicated gonorrhea.

Retreatment: The National Center for Disease Control, Venereal Disease Branch, U.S. Dept. H.E.W. recommends:

Test cure procedures at approximately 7-14 days after therapy. In the male, a gram-stained smear is adequate if positive; otherwise, a culture specimen should be obtained from the anterior urethra. In the female, culture specimens should be obtained from both the endocervical and anal canal sites.

Retreatment in males is indicated if urethral discharge persists 3 or more days following initial therapy and smear or culture remains positive. Follow-up treatment consists of 4.8 million units I.M. divided in 2 injection sites at single visit.

In uncomplicated gonorrhea in the female, retreatment is indicated if follow-up cervical or rectal cultures remain positive for *N. gonorrhoeae*. Follow-up treatment consists of 4.8 million units daily on 2 successive days.

Syphilis: all gonorrhea patients should have a serologic test for syphilis at the time of diagnosis. Patients with gonorrhea who also have syphilis should be given additional treatment appropriate to the stage of syphilis.

Composition: Each TUBEX® disposable syringe 2,400,000 units (4-cc. size) contains procaine penicillin G in a stabilized aqueous suspension with sodium citrate buffer, and as w/v approximately 0.7% lecithin, 0.4% carboxymethylcellulose, 0.4% polyvinylpyrrolidone, 0.01% propylparaben and 0.09% methylparaben. The multiple-dose 10-cc. vial contains per cc. 300,000 units procaine penicillin G in a stabilized aqueous suspension with sodium citrate buffer and approximately 7 mg. lecithin, 2 mg. carboxymethylcellulose, 3 mg. polyvinylpyrrolidone, 0.5 mg. sorbitan monopalmitate, 0.5 mg. polyoxyethylene sorbitan monopalmitate, 0.14 mg. propylparaben and 1.2 mg. methylparaben.

Five are graduating with honors. How many with VD?

On the average, you can figure the incidence of VD among teenagers at about 900 per 100,000 population*. And growing.

Among those in the 20-24 age-group, the incidence is even higher. And it, too, is growing.

In the long run, a populace educated to the risks and prevention of VD is probably the best answer to the problem. Meanwhile, though, adequate doses of the recommended types of penicillin remain a formidable weapon.

IN SYPHILIS

INJECTION

Bicillin[®] LONG-ACTING

(STERILE BENZATHINE PENICILLIN G SUSPENSION) WYETH

Syphilis is preferably treated with benzathine penicillin G, which is also the drug of choice for prophylaxis after exposure. Administration of 2.4 million units (1.2 million in each buttock) usually cures most cases of primary, secondary and latent syphilis with negative spinal fluid.

Indications: In treatment of infections due to penicillin G-sensitive microorganisms that are susceptible to the low and very prolonged serum levels common to this particular dosage form. Therapy should be guided by bacteriological studies (including sensitivity tests) and by clinical response.

The following infections will usually respond to adequate dosage of intramuscular benzathine penicillin G.—Venereal infections: Syphilis, yaws, bejel and pinta.

FOR DEEP INTRAMUSCULAR INJECTION ONLY.

Contraindications: Previous hypersensitivity reaction to any penicillin.

Warnings: Serious and occasionally fatal hypersensitivity (anaphylactoid) reactions have been reported. Anaphylaxis is more frequent following parenteral therapy but has occurred with oral penicillins. These reactions are more apt to occur in individuals with history of sensitivity to multiple allergens.

Severe hypersensitivity reactions with cephalosporins have been well documented in patients with history of penicillin hypersensitivity. Before penicillin therapy, carefully inquire into previous hypersensitivity to penicillins, cephalosporins and other allergens. If allergic reaction occurs, discontinue drug and treat with usual agents, e.g., pressor amines, antihistamines and corticosteroids.

Precautions: Use cautiously in individuals with histories of significant allergies and/or asthma.

Carefully avoid intravenous or intraarterial use, or injection into or near major peripheral nerves or blood vessels, since such injection may produce neurovascular damage.

In streptococcal infections, therapy must be sufficient to eliminate the organism; otherwise the sequelae of streptococcal disease may occur. Take cultures following completion of treatment to determine whether streptococci have been eradicated.

Prolonged use of antibiotics may promote overgrowth of non-susceptible organisms including fungi. Take appropriate measures should superinfection occur.

Adverse Reactions: Hypersensitivity reactions reported are skin eruptions (maculopapular to exfoliative dermatitis), urticaria and other serum sickness reactions, laryngeal edema and anaphylaxis. Fever and eosinophilia may frequently be only reaction observed. Hemolytic anemia, leucopenia, thrombocytopenia, neuropathy and nephropathy are infrequent and usually associated with high doses of parenteral penicillin.

As with other antisyphilitics, Jarisch-Herxheimer reaction has been reported.

Administration and Dosage: Venereal infections—

Syphilis—Primary, secondary and latent—2.4 million units (1 dose).

Late (tertiary and neurosyphilis)—2.4 million units at 7 day intervals for three doses.

Congenital—under 2 years of age, 50,000 units/Kg. body weight; ages 2-12 years, adjust dosage based on adult dosage schedule.

(Shake multiple-dose vial vigorously before withdrawing the desired dose.) Administer by **deep intramuscular injection** in the upper outer quadrant of the buttock. In infants and small children, the midlateral aspect of the thigh may be preferable. When doses are repeated, vary the injection site. Before injecting the dose, aspirate to be sure needle bevel is not in a blood vessel. If blood appears, remove the needle and inject in another site.

Composition: 2,400,000 units in 4-cc. single dose disposable syringe. Each TUBEX disposable syringe also contains in aqueous suspension with sodium citrate buffer, as w/v approximately 0.5% lecithin, 0.4% carboxymethylcellulose, 0.4% polyvinylpyrrolidone, 0.01% propylparaben and 0.09% methylparaben. Units benzathine penicillin G (as active ingredient); 300,000 units per cc.—10-cc. multi-dose vial. Each cc. also contains sodium citrate buffer, approximately 6 mg. lecithin, 3 mg. polyvinylpyrrolidone, 1 mg. carboxymethylcellulose, 0.5 mg. sorbitan monopalmitate, 0.5 mg. polyoxyethylene sorbitan monopalmitate, 0.14 mg. propylparaben and 1.2 mg. methylparaben.

Wyeth Laboratories
Philadelphia, Pa. 19101

Catapres Man. He doesn't have to take it lying down.

Orthostatic effects are mild
and infrequent; normal
hemodynamic responses to
exercise are not altered

Catapres reduces blood pressure to virtually the same extent in both the lying and standing positions and after exercise (see chart).

Postural hypotension is therefore rarely a problem. And normal hemodynamic responses to exercise remain essentially unchanged.

Catapres. A new antihypertensive agent whose mechanism of action appears to be central alpha-adrenergic stimulation as demonstrated in animal studies.

Try Catapres. Because *how* you lower blood pressure can make a difference.

**Mean blood pressure reduction (mm Hg) after 4 weeks
in 9 hypertensive patients receiving Catapres (0.15 mg/day)**

new Catapres[®]

(clonidine hydrochloride)

Tablets of 0.1 and 0.2 mg

Boehringer Ingelheim
Boehringer Ingelheim Ltd.
Elmsford, New York 10523

Please see adjoining column
for brief summary of
prescribing information.

The Pain Phone

new Catapres® (clonidine hydrochloride)

Tablets of 0.1 mg and 0.2 mg

Indication: The drug is indicated in the treatment of hypertension. As an antihypertensive drug, Catapres (clonidine hydrochloride) is mild to moderate in potency. It may be employed in a general treatment program with a diuretic and/or other antihypertensive agents as needed for proper patient response.

Warnings: Tolerance may develop in some patients necessitating a reevaluation of therapy.

Usage in Pregnancy: In view of embryotoxic findings in animals, and since information on possible adverse effects in pregnant women is limited to uncontrolled clinical data, the drug is not recommended in women who are or may become pregnant unless the potential benefits outweigh the potential risk to mother and fetus.

Usage in Children: No clinical experience is available with the use of Catapres (clonidine hydrochloride) in children.

Precautions: When discontinuing Catapres (clonidine hydrochloride), reduce the dose gradually over 2 to 4 days to avoid a possible rapid rise in blood pressure and associated subjective symptoms such as nervousness, agitation, and headache. Patients should be instructed not to discontinue therapy without consulting their physician. Rare instances of hypertensive encephalopathy and death have been recorded after cessation of clonidine hydrochloride therapy. A causal relationship has not been established in these cases. It has been demonstrated that an excessive rise in blood pressure, should it occur, can be reversed by resumption of clonidine hydrochloride therapy or by intravenous phentolamine. Patients who engage in potentially hazardous activities, such as operating machinery or driving, should be advised of the sedative effect. This drug may enhance the CNS-depressive effects of alcohol, barbiturates and other sedatives. Like any other agent lowering blood pressure, clonidine hydrochloride should be used with caution in patients with severe coronary insufficiency, recent myocardial infarction, cerebrovascular disease or chronic renal failure.

As an integral part of their overall long-term care, patients treated with Catapres (clonidine hydrochloride) should receive periodic eye examinations. While, except for some dryness of the eyes, no drug-related abnormal ophthalmologic findings have been recorded with Catapres, in several studies the drug produced a dose-dependent increase in the incidence and severity of spontaneously occurring retinal degeneration in albino rats treated for 6 months or longer.

Adverse Reactions: The most common reactions are dry mouth, drowsiness and sedation. Constipation, dizziness, headache, and fatigue have been reported. Generally these effects tend to diminish with continued therapy. The following reactions have been associated with the drug, some of them rarely. (In some instances an exact causal relationship has not been established.) These include: Anorexia, malaise, nausea, vomiting, parotid pain, mild transient abnormalities in liver function tests; one report of possible drug-induced hepatitis without icterus and hyperbilirubinemia in a patient receiving clonidine hydrochloride, chloralhydrate and papaverine hydrochloride.

Weight gain, transient elevation of blood glucose, or serum creatine phosphokinase; congestive heart failure, Raynaud's phenomenon; vivid dreams or nightmares, insomnia, other behavioral changes, nervousness, restlessness, anxiety and mental depression. Also rash, angioneurotic edema, hives, urticaria, thinning of the hair, pruritus not associated with a rash, impotence, urinary retention, increased sensitivity to alcohol, dryness, itching or burning of the eyes, dryness of the nasal mucosa, pallor, gynecomastia, weakly positive Coombs' test, asymptomatic electrocardiographic abnormalities manifested as Wenckebach period or ventricular trigeminy.

Overdosage: Profound hypotension, weakness, somnolence, diminished or absent reflexes and vomiting followed the accidental ingestion of Catapres (clonidine hydrochloride) by several children from 19 months to 5 years of age. Gastric lavage and administration of an analeptic and vasopressor led to complete recovery within 24 hours. Tolazoline in intravenous doses of 10 mg at 30-minute intervals usually abolishes all effects of Catapres (clonidine hydrochloride) overdosage.

How Supplied: Catapres, brand of clonidine hydrochloride, is available as 0.1 mg (tan) and 0.2 mg (orange) oval, single-scored tablets in bottles of 100.

For complete details, please see full prescribing information. Under license from Boehringer Ingelheim GmbH

Our prescription for your practice: Take MediManager and get plenty of sleep.

Security Pacific Bank is glad to introduce MediManager: A comprehensive financial management package for the physician and dentist.

MediManager is the most complete professional service package ever offered to physicians and dentists. It's designed to be of help in (1) patient billing and collection, (2) patient credit, (3) equipment financing, (4) acquisition of facilities, and (5) estate management.

MediManager features a computerized patient billing service with insurance form preparation capabilities. It offers remittance banking and payroll help, as well as a unique patient credit plan that gives you prompt payment for your services. MediManager provides commercial and real estate loans, equipment loans and leasing, auto leasing and locational assistance. Finally, it can help you with trusts, pension plans and profit-sharing programs.

Ask your branch manager about MediManager: Something special from Security Pacific Bank.

How many of your patients know what the B vitamins are?

But they do know what breads and cereals are.

The foods above have several nutrients in common. Among them are the vitamin B complex, necessary for healthy skin and a well-functioning nervous system. The B vitamins include thiamin (B₁), niacin and riboflavin (B₂). These foods are classified as the Bread & Cereal Group in the U.S. Department of Agriculture's Four Food Groups system.

Some physicians counsel patients in terms of nutrients. Which is easier for them to understand — foods or nutrients?

For attractive, color copies of the Four Food Groups guide for your patients, write: Dairy Council of California, Box 28F, Sacramento, CA 95825.

Dairy Council of California

*The Four Food Groups—milk, meat, vegetables and fruits,
breads and cereals — a practical guide to good nutrition.*

to help treat what you often find:
obvious moderate to severe anxiety
with a less obvious underlying depression

TRIAVIL®

containing perphenazine and amitriptyline HCl

a tranquilizer-antidepressant

"...and she'd jump every time
the phone rang."

"All right, I agree, she was
obviously very anxious...you
said she hadn't been sleeping..."

"She felt *tired enough* to sleep...
not relaxed enough... food, too...
she's too nervous to eat... says
she *can't* relax... afraid there's
something very wrong with her."

"...that's a good place to start!
Did you find anything wrong
with her?"

Treatment with TRIAVIL—a balanced view.

Tablets TRIAVIL are available in four different combinations affording flexibility and individualized dosage adjustment. Close supervision of patients is essential until satisfactory remission has taken place. Since suicide is a possibility in any depressive illness, patients should not have easy access to large quantities of the drug. The drug may impair alertness and potentiate the response to alcohol. It should not be used during the acute recovery phase following myocardial infarction or given to patients who have received an MAOI within two weeks. TRIAVIL should be used with caution in glaucoma and in patients prone to urinary retention. It is contraindicated in CNS depression and in the presence of evidence of bone marrow depression.

MSD For a brief summary of prescribing information,
MERCK please turn to the following page.
SHARP
DOHME

"Not a thing...negative...nothing organically wrong. Still has a fair list of somatic complaints. I've tried to reassure her...to let her talk...to help her sort things out. She's been in to see me a number of times."

"...what about medication?"

"Just what I was coming to... I've had her on tranquilizers. And *that's* what puzzles me. I'm not getting the response I hoped for. She's no better...perhaps a little worse. It's sad to see."

"...I think 'sad' may be what you're not seeing! You know, this sounds like another case where the *anxiety* is so clear and pervasive we tend to overlook the depressive part of the picture. I'm not sure that we shouldn't almost always think of anxiety *with* depression...not anxiety alone. Take another look at your records...talk to her some more. If you decide she's depressed, I think you might want to consider TRIAVIL....It can help relieve her entire symptom complex...control the anxiety... while at the same time treat the depression!"

TRIAVIL®

containing perphenazine and amitriptyline HCl

a tranquilizer-antidepressant

Available:

TRIAVIL® 2-25: Each tablet contains
2 mg perphenazine and 25 mg amitriptyline HCl

TRIAVIL® 2-10: Each tablet contains
2 mg perphenazine and 10 mg amitriptyline HCl

TRIAVIL® 4-25: Each tablet contains
4 mg perphenazine and 25 mg amitriptyline HCl

TRIAVIL® 4-10: Each tablet contains
4 mg perphenazine and 10 mg amitriptyline HCl

INITIAL THERAPY FOR MANY PATIENTS

TRIAVIL® 2-25 (or TRIAVIL® 4-25) t.i.d. or q.i.d.

FOR FLEXIBILITY IN ADJUSTING MAINTENANCE THERAPY

TRIAVIL® 2-10 (or TRIAVIL® 4-10)

CONTRAINDICATIONS: Central nervous system depression from drugs (barbiturates, alcohol, narcotics, analgesics, antihistamines); bone marrow depression; known hypersensitivity to phenothiazines or amitriptyline. Do not give concomitantly with MAOI drugs because hyperpyretic crises, severe convulsions, and deaths have occurred from such combinations. Allow minimum of 14 days between therapies, then initiate therapy with TRIAVIL cautiously, with gradual increase in dosage until optimum response is achieved. Not recommended for use during acute recovery phase following myocardial infarction.

WARNINGS: TRIAVIL should not be given with guanethidine or similarly acting compounds. Use cautiously in patients with history of urinary retention, angle-closure glaucoma, increased intraocular pressure, or convulsive disorders. In patients with angle-closure glaucoma, even average doses may precipitate an attack. Patients with cardiovascular disorders should be watched closely. Tricyclic antidepressants, including amitriptyline HCl, particularly in high doses, have been reported to produce arrhythmias, sinus tachycardia, and prolongation of conduction time. Myocardial infarction and stroke have been reported with tricyclic antidepressant drugs. Close supervision is required for hyperthyroid patients or those receiving thyroid medication. Caution patients performing hazardous tasks, such as operating machinery or driving motor vehicles, that drug may impair mental and/or physical abilities. Not recommended in children or during pregnancy.

PRECAUTIONS: Suicide is a possibility in depressed patients and may remain until significant remission occurs. Such patients should not have access to large quantities of this drug.

Perphenazine: Should not be used indiscriminately. Use with caution in patients who have previously exhibited severe adverse reactions to other phenothiazines. Likelihood of untoward actions is greater with high doses. Closely supervise with any dosage. The antiemetic effect of perphenazine may obscure signs of toxicity due to overdosage of other drugs or make more difficult the diagnosis of disorders such as brain tumor or intestinal obstruction. A significant, not otherwise explained, rise in body temperature may suggest individual intolerance to perphenazine, in which case discontinue.

If hypotension develops, epinephrine should not be employed, as its action is blocked and partially reversed by perphenazine. Phenothiazines may potentiate the action of central nervous system depressants (opiates, analgesics, antihistamines, barbiturates, alcohol) and atropine. In concurrent therapy with any of these, TRIAVIL should be given in reduced dosage. May also potentiate the action of heat and phosphorous insecticides.

Amitriptyline: In manic-depressive psychosis, depressed patients may experience a shift toward the manic phase if they are treated with an antidepressant. Patients with paranoid symptomatology may have an exaggeration of such symptoms. The tranquilizing effect of TRIAVIL seems to reduce the likelihood of this effect. When amitriptyline HCl is given with anticholinergic agents or sympathomimetic drugs, including epinephrine combined with local anesthetics, close supervision and careful adjustment of dosages are required.

Caution is advised if patients receive large doses of ethchlorvynol concurrently. Transient delirium has been reported in patients who were treated with 1 g of ethchlorvynol and 75-150 mg of amitriptyline HCl.

Amitriptyline HCl may enhance the response to alcohol and the effects of barbiturates and other CNS depressants.

Concurrent administration of amitriptyline HCl and electroshock therapy may increase the hazards associated with such therapy. Such treatment should be limited to patients for whom it is essential. Discontinue several days before elective surgery if possible. Elevation and lowering of blood sugar levels have both been reported.

to help treat what you often find:
obvious moderate to severe anxiety
with a less obvious underlying depression

ADVERSE REACTIONS: Similar to those reported with either constituent alone.

Perphenazine: Side effects may be any of those reported with phenothiazine drugs: extrapyramidal symptoms (opisthotonus, oculogyric crisis, hyperreflexia, dystonia, akathisia, acute dyskinesia, ataxia, parkinsonism) can usually be controlled by the concomitant use of effective antiparkinsonian drugs and/or by reduction in dosage, but sometimes persist after discontinuation of the phenothiazine.

Tardive dyskinesia may appear in some patients on long-term therapy or may occur after drug therapy with phenothiazines and related agents has been discontinued. The risk appears to be greater in elderly patients on high-dose therapy, especially females. Symptoms are persistent and in some patients appear to be irreversible. The syndrome is characterized by rhythmical involuntary movements of the tongue, face, mouth, or jaw (e.g., protrusion of tongue, puffing of cheeks, puckering of mouth, chewing movements). Involuntary movements of the extremities sometimes occur. There is no known treatment for tardive dyskinesia; antiparkinsonism agents usually do not alleviate the symptoms. It is advised that all antipsychotic agents be discontinued if the above symptoms appear. If treatment is reinstituted, or dosage of the particular drug increased, or another drug substituted, the syndrome may be masked. It has been suggested that fine vermicular movements of the tongue may be an early sign of the syndrome, and that the full-blown syndrome may not develop if medication is stopped when lingual vermiculation appears.

Other side effects are skin disorders (photosensitivity, itching, erythema, urticaria, eczema, up to exfoliative dermatitis); other allergic reactions (asthma, laryngeal edema, angioneurotic edema, anaphylactoid reactions); peripheral edema; reversed epinephrine effect; hyperglycemia; endocrine disturbances (lactation, galactorrhea, gynecomastia, disturbances of menstrual cycle); altered cerebrospinal fluid proteins; paradoxical excitement; hypertension, hypotension, tachycardia, and ECG abnormalities (quinidine-like effect); reactivation of psychotic processes; catatonic-like states; autonomic reactions, such as dry mouth or salivation, headache, anorexia, nausea, vomiting, constipation, obstipation, urinary frequency or incontinence, blurred vision, nasal congestion, and a change in pulse rate; hypnotic effects; pigmentary retinopathy; corneal and lenticular pigmentation; occasional lassitude, muscle weakness, mild insomnia. Other adverse reactions reported with various phenothiazine compounds include blood dyscrasias (pancytopenia, thrombocytopenic purpura, leukopenia, agranulocytosis, eosinophilia); liver damage (jaundice, biliary stasis); grand mal convulsions; cerebral edema; polyphagia; photophobia; skin pigmentation; and failure of ejaculation.

Amitriptyline: Note: Listing includes a few reactions not reported for this drug, but which have occurred with other pharmacologically similar tricyclic antidepressant drugs. **Cardiovascular:** Hypotension; hypertension; tachycardia; palpitation; myocardial infarction; arrhythmias; heart block; stroke. **CNS and Neuromuscular:** Confusional states; disturbed concentration; disorientation; delusions; hallucinations; excitement; anxiety; restlessness; insomnia; nightmares; numbness, tingling, and paresthesias of the extremities; peripheral neuropathy; incoordination; ataxia; tremors; seizures; alteration in EEG patterns; extrapyramidal symptoms; tinnitus. **Anticholinergic:** Dry mouth; blurred vision; disturbance of accommodation; constipation; paralytic ileus; urinary retention; dilatation of urinary tract. **Allergic:** Skin rash; urticaria; photosensitization; edema of face and tongue. **Hematologic:** Bone marrow depression including agranulocytosis; leukopenia; eosinophilia; purpura; thrombocytopenia. **Gastrointestinal:** Nausea; epigastric distress; vomiting; anorexia; stomatitis; peculiar taste; diarrhea; parotid swelling; black tongue. **Endocrine:** Testicular swelling and gynecomastia in the male; breast enlargement and galactorrhea in the female; increased or decreased libido; elevated or lowered blood sugar levels. **Other:** Dizziness, weakness; fatigue; headache; weight gain or loss; increased perspiration; urinary frequency; mydriasis; drowsiness; jaundice; alopecia. **Withdrawal Symptoms:** Abrupt cessation after prolonged administration may produce nausea, headache, and malaise. These are not indicative of addiction.

OVERDOSAGE: All patients suspected of having taken an overdosage should be admitted to a hospital as soon as possible. Treatment is symptomatic and supportive. However, the intravenous administration of 1-3 mg of physostigmine salicylate has been reported to reverse the symptoms of tricyclic antidepressant poisoning. On this basis, in severe overdosage with perphenazine-amitriptyline combinations, symptomatic treatment of central anticholinergic effects with physostigmine salicylate should be considered.

ACKNOWLEDGMENT

The Committee on Scientific Assemblies acknowledges the hard work and fine cooperation of the section program planners and the members of the 21 Advisory Panels in the development of the 1975 Scientific Assembly.

This annual assembly represents an opportunity for those from all specialties to meet and discuss

issues of overlapping or common interest and to participate in educational programs designed especially for their needs.

The continual improvement in the educational quality of the programs is most gratifying to the Scientific Board and to the full membership of the California Medical Association.

ALBERT D. HALL, MD, *Chairman*
Committee on Scientific Assemblies
of the Scientific Board

PROGRAM

CALIFORNIA MEDICAL ASSOCIATION

104th
Annual Session
and
4th Western Scientific
Assembly

February 21-26, 1975

Biltmore Hotel
and
Los Angeles Convention Center
Los Angeles

- ✓ Specialty Section Programs
- ✓ Special Conferences
- ✓ Scientific and Technical Exhibits
- ✓ Meetings of the House of Delegates

Information

PLEASE NOTE

All meeting room assignments, not available at press time, will appear in the Annual Session Handprogram.

BADGES

It is important that badges be worn at all times. Admission to all meetings and exhibits is by badge only.

COUNCIL

The Council will meet on Friday; time and location to be announced. Executive sessions will be posted on the hotel schedule boards.

HOUSE OF DELEGATES

For meeting times, places and agenda—see page 26.

MESSAGE CENTER

Provided through the courtesy of Pacific Telephone Company.

Los Angeles Convention Center—Lobby, North Wall
(213) 741-2193
9:00 am to 5:00 pm, Friday-Monday

Biltmore Hotel—Galeria
(213) 629-6416
9:00 am to 5:00 pm, Saturday-Wednesday

The Association will attempt to transmit emergency messages to individual physicians. Each physician should notify his own office of the exact times and locations of meetings he plans to attend.

Routine messages will be kept at the Message Centers. Physicians are requested to check with the Message Center at least once daily.

EXHIBITS

Technical and Scientific and Organizational Exhibits are located in the Convention Center.

INFORMATION DESK

The information desk will be located in the Convention Center Lobby near the CMA Registration Booth, and will be open daily from 9:00 am to 5:00 pm, Friday-Monday.

REGISTRATION

Registration will take place in the Convention Center Lobby, starting Friday, February 21 through Monday, February 24, 9:00 am to 5:00 pm.

All members, guests and visitors are requested to register immediately on arrival.

Admission to the conferences and section meetings, as well as to the exhibit area, is by badge only.

Members wishing to vote in specialty sections must indicate the appropriate section when registering; voting in other sections will not be allowed.

QUALIFICATIONS/REQUIREMENTS FOR REGISTRATION

All MDs with credentials showing that they hold a valid license to practice medicine (e.g., membership card in CMA, AMA or county medical society).

Medical students upon presentation of credentials from their medical schools, letters from dean's office, or membership card in CMA, AMA or SAMA.

Medical assistants upon presentation of letter from a physician-employer or AAMA membership card.

Military paramedical personnel upon presentation of a letter from their commanding officer.

Dentists (DDS); Doctors of Veterinary Medicine (DVM); registered nurses (RN); student nurses, x-ray technicians; allied public health personnel and others will be admitted provided they have proper identification.

ALL QUESTIONS ON ADMISSION will be passed upon by a member of the Committee on Registration present at the desk.

SHUTTLE BUS

There will be continuous shuttle bus service between the Los Angeles Convention Center and the Biltmore Hotel during the hours when meetings are in progress.

SPECIAL ANNOUNCEMENT

Each scientific program which is acceptable for Category I (formal) credit toward CMA's Certificate in Continuing Medical Education is so designated:

*Acceptable for Category I Credit in
the CMA Certification Program*

The majority of the other educational and scientific programs are acceptable for informal credit. Physicians should list on the certification reporting form the number of program hours attended. Forms and further information are available at the CMA Continuing Medical Education Booth in the exhibit area. Plan to stop by.

Out of State Guests

SPECIALTY SECTION MEETINGS

Allergy

William R. Solomon, MD, Ann Arbor, Michigan
Associate Professor of Medicine, University Hospital, University of Michigan Medical Center

Anesthesiology/Physical Medicine and Rehabilitation

Richard E. Black, MD, Seattle, Washington
Assistant Professor, Department of Anesthesiology and Anesthesia Research Center, Coordinator of University Hospital Pain Clinic, University of Washington, School of Medicine

Richard C. Chapman, PhD, Seattle, Washington
Assistant Professor, Departments of Anesthesiology, Psychiatry, and Behavioral Sciences, Department of Psychology Consultant to the Pain Clinic, University of Washington, School of Medicine

Chest Diseases

Head, Pulmonary Department, Cleveland Clinic; Director, Respiratory Therapy and Pulmonary Function Laboratory, Cleveland Clinic; Clinical Professor, Preventive Medicine, Ohio State University

Dermatology and Industrial Medicine

Raymond R. Suskind, MD, Cincinnati, Ohio
Director of the Department of Environmental Health and the Kettering Laboratory, University of Cincinnati

General and Family Practice/ Otolaryngology/Orthopaedics

Paul Meyer, MD, Chicago, Illinois

General Surgery

Arthur J. Donovan, MD, Mobile, Alabama
Professor and Chairman, Department of Surgery; Acting Dean, College of Medicine, University of South Alabama

Internal Medicine

Truman G. Schnabel, Jr., MD, Philadelphia, Pennsylvania
Representative, American College of Physicians

Edward C. Rosenow, Jr., MD, Philadelphia, Pennsylvania
Representative, American College of Physicians

Preventive Medicine and Public Health

Lewis C. Robbins, MD, Indianapolis, Indiana
Director, Health Hazard Appraisal, Methodist Hospital

SPECIAL CONFERENCE

Cancer Symposium

Bernard Fisher, MD, Pittsburgh, Pennsylvania
Professor of Surgery, School of Medicine, University of Pittsburgh

Ralph E. Johnson, MD, Bethesda, Maryland
Chief, Radiation Branch, National Cancer Institute

IMPORTANT ELECTION NOTICE TO ALL CMA MEMBERS

As a CMA member, you are a voting member of one of the 22 scientific specialty sections. The scientific program of each section includes a *business meeting to elect officers of the section*. These three officers—chairman, secretary, and assistant secretary—will be your representatives on the Advisory Panel to speak for you on scientific and educational issues of vital concern to your specialty: planning programs of continuing medical education; questions and controversies of acceptable medical practice; evaluation of proposed legislation, and the publication of "Epitomes of Progress" for *The Western Journal of Medicine*.

These three officers also make nominations to the Scientific Board.

Make your voice heard in these important areas by participating in the business meeting and voting for the officers of your section. See your section program for time and place.

CALIFORNIA MEDICAL ASSOCIATION

FOR ACTION IN 1975

Three Constitutional amendments were introduced in the 1974 House of Delegates. Under the terms of the Constitution, these amendments must lie on the table until the next regular meeting of the House of Delegates, and must be published twice before they come before the House of Delegates for action.

ARTICLE III, PART B, SECTION 9. COMPOSITION

Introduced by: Council
Representing: Council
Author: E. Kash Rose, MD

Constitutional Amendment No. 1-74 Committee G

Resolved: That Article III, Part B.—Council.—Section 9.—Composition be amended by deleting the words in brackets and adding the words in italics, so that this section shall now read:

The Council shall consist of:

(a) Elected councilors from the councilor districts set forth in Section 10. Each councilor district shall be entitled to elect one councilor for each 1,000 active members, or major fraction thereof, according to its membership as of the first day of September of the preceding year; provided, that each councilor district shall be entitled to a minimum of one councilor.

(b) Elected councilors from any one district shall not, at any time, exceed 40 percent of the total Council membership.

(c) The president, president-elect, immediate past president,¹⁰ speaker and vice-speaker.

[(d) The secretary, *who shall be selected from the Council* and editor, when they are members of the Association, shall be ex officio members of the Council without the right to vote.¹¹]

[e] *(d)* The editor, when [they are members] *he is a member* of the Association, shall be *an* ex officio member[s] of the Council without the right to vote.

[f] *(e)* One member of the Executive Committee of the Scientific Board, who shall be elected by the Scientific Board from representatives of the scientific sections or members-at-large, who shall be an ex officio member of the Council with the right to vote.

ACTION: Tabled for one year; to be acted upon at the 1975 meeting of the House of Delegates.

ARTICLE III, PART B, SECTION 11. ELECTION OF COUNCILORS

Introduced by: Council
Representing: Council
Author: E. Kash Rose, MD

Constitutional Amendment No. 2-74 Committee G

Resolved: That Article III, Part B, Section 11, be amended, to read:

District councilors shall be elected [by vote of the delegates from each district] in the manner and at the time specified in the Bylaws; provided, however, that at the first meeting of the House of Delegates after a district councilor has been selected, his name shall be submitted to the House by the delegates from the district, and (1) if there is no challenge by any delegate then the speaker shall declare his election completed, and (2) if any delegate shall challenge the election on any ground, including fitness of the nominee of the district to serve as a district councilor, the questions presented by the challenge shall be submitted to a Qualifications Committee consisting of the president, president-elect and one delegate, appointed by the speaker, from the councilor district involved. The Qualifications Committee shall consider all grounds upon which the nominee is challenged and report back to the House. If the committee reports in favor of confirming the nominee's election, the speaker shall declare him elected. If the committee reports against confirming the nominee's election, a three-fourths (¾) affirmative vote shall be necessary to sustain the report of the committee, in which event the nominee shall be ineligible to serve as district councilor and the delegates from the district shall immediately proceed to the selection of another nominee for the vacant office. If an adverse report of the Qualifications Committee is not sustained then the nominee shall be declared elected by the speaker.

ACTION: Tabled for one year; to be acted upon at the 1975 meeting of the House of Delegates.

ARTICLE III, PART B, SECTION 12. COUNCILORS: TERMS OF OFFICE

Introduced by: Council
Representing: Council
Author: E. Kash Rose, MD

Constitutional Amendment No. 3-74 Committee G

Resolved: That Article III, Part B, Section 12, be amended, to read:

Section 12. Councilors: Terms of Office. Councilors shall serve for terms of three (3) years; [one-third (⅓) to be elected in each year] except that the initial term of a new office arising hereunder may be for less than three (3) years, as the Bylaws may provide, to allow for staggering of terms. A councilor shall not serve more than three (3) consecutive terms of office.

ACTION: Tabled for one year; to be acted upon at the 1975 meeting of the House of Delegates.

MRS. HARRY S. DVORSKY

*Rolls and coffee served 7:30 a.m. to 8:30 a.m.
Monday and Tuesday*

A half-ounce of prevention

Use it to prevent a topical infection. Or to treat one that's already started.

In either case, it's good medicine. Whether for lacerations, burns, open wounds, IV catheter or surgical aftercare.

Neosporin® Ointment provides broad antibacterial coverage against common susceptible pathogens. And since it contains three antibiotics that are rarely used systemically, the risk of sensitization is reduced.

Neosporin Ointment. A half-ounce of prevention. Also available in a full ounce of prevention and in convenient foil packets.

Neosporin Ointment carried on Apollo and Skylab missions.

Neosporin® Ointment (polymyxin B-bacitracin-neomycin)

Each gram contains: Aerosporin® brand Polymyxin B Sulfate 5,000 units; zinc bacitracin 400 units; neomycin sulfate 5 mg (equivalent to 3.5 mg neomycin base); special white petrolatum qs.
In tubes of 1 oz and 1/2 oz and 1/32 oz (approx.) foil packets.

INDICATIONS: *Therapeutically*, used as an adjunct to appropriate systemic therapy for topical infections, primary or secondary, due to susceptible organisms, as in: • infected burns, skin grafts, surgical incisions, otitis externa • primary pyodermas (impetigo, ecthyma, sycosis vulgaris, paronychia) • secondarily infected dermatoses (eczema, herpes, and seborrheic dermatitis) • traumatic lesions, inflamed or suppurating as a result of bacterial infection. *Prophylactically*, the ointment may be used to prevent bacterial contamination in burns, skin grafts, incisions, and other clean lesions. For abrasions, minor cuts and wounds accidentally incurred, its use may prevent the development of infection and permit wound healing.

CONTRAINDICATIONS: Not for use in the eyes or external ear canal if the eardrum is perforated. This product is contraindicated in those individuals who have shown hypersensitivity to any of the components.

WARNING: Because of the potential hazard of nephrotoxicity and ototoxicity due to neomycin, care should be exercised when using this product in treating extensive burns, trophic ulceration and other extensive conditions where

absorption of neomycin is possible. In burns where more than 20 percent of the body surface is affected, especially if the patient has impaired renal function or is receiving other aminoglycoside antibiotics concurrently, not more than one application a day is recommended.

PRECAUTIONS: As with other antibacterial preparations, prolonged use may result in overgrowth of nonsusceptible organisms, including fungi. Appropriate measures should be taken if this occurs.

ADVERSE REACTIONS: Neomycin is a not uncommon cutaneous sensitizer. Articles in the current literature indicate an increase in the prevalence of persons allergic to neomycin. Ototoxicity and nephrotoxicity have been reported (see Warning section).

PHYSICIANS WANTED

GP WANTED: Southern California, Orange County. Three-man clinic long established industrial and private practice, seeking replacement for member rejoining service. Minimal cost, good net, excellent hours. Permanent association desired on expense sharing basis. California license necessary. Open approximately January 1, 1975. Write Box No. 9402, Western Journal of Medicine, 731 Market St., San Francisco, CA 94103.

UNIVERSITY OF CALIFORNIA HOSPITALS & CLINICS, SAN FRANCISCO—immediate need for Medical Director of Screening and Acute Care Clinic. Must be board eligible or certified in Internal Medicine or Family Practice. Clinic provides screening and acute non-emergent care for adult self-referred patients and thus serves as entry point for many patients into the University Clinics system. Full-time equivalent position. Salary \$28,500/year with adjustments consistent to qualifications and experience. For further information contact: Dr. Joseph C. Barbaccia, Associate Professor, University of California, San Francisco, CA 94143, or call (415) 666-4061.

ORTHOPEDIST: Board certified or board eligible, for large multispecialty group. Department currently consists of seven orthopedists. Department and area expanding. Edward H. Start, MD, Chief of Orthopedics, The Permanente Clinic, 5055 North Greeley Ave., Portland, Oregon 97217.

PUBLIC HEALTH PHYSICIAN

New position in a progressive county health department having 80 employees. Will head the county child health and disability prevention program. Activities will include program planning, administration, staff supervision, community outreach and screening activities, and the providing of early and periodic assessments of the health status of children for the early identification and referral for treatment of those with potential handicapping and/or disabling conditions.

Salary in range of \$26,460 to \$32,160 per year with anticipated increase of about 10% effective 12/1/74, or one may work on contract basis with higher income. Very pleasant, modern working environment, generous employee benefits, five day-40 hour week, and semi-rural, centrally located community of 100,000. Must be California licensed, or license eligible, with one year of experience in providing, administering, or planning health services specifically for children.

In the treatment of the asthma complex consider the advantages of **BRONKOTABS®**

1

Potent Bronchodilation

ephedrine and theophylline relax bronchial musculature to open airways and keep them open.

Efficient Expectorant Action

glyceryl guaiacolate helps liquefy tenacious secretions and enables productive cough to clear airways and keep them clear.

2

3

Gentle Calming Action

phenobarbital provides mild calming action to diminish hyperreactions that can trigger bronchospasm.

PRECAUTIONS AND ADVERSE EFFECTS: Sympathomimetic side effects are minimal, and there are none of the dangers or side effects associated with steroid therapy. However, frequent or prolonged use may cause nervousness, restlessness, or sleeplessness. Should be used with caution in the presence of hypertension, heart disease or hyperthyroidism. Drowsiness may occur. Ephedrine may cause urinary retention, especially in the presence of partial obstruction, as in prostatism.

DOSAGE: Adults, one tablet every three or four hours, four or five times daily. Children over six, one-half the adult dose. Children under six, as directed.

SUPPLIED: Bottles of 100 and 1,000 tablets.

GUESTS' NAMES AND ADDRESSES:

IN NATURAL THYROID THERAPY:

ARE PATIENTS GETTING THE POTENCY YOU PRESCRIBE?

Unlike U.S.P.
desiccated thyroid,
Proloid® (thyro-
globulin) offers
the assurance of
constant potency.

To begin with,
Proloid is uniquely
purified. The

thyroglobulin extracted from hog thyroid is devoid of any glandular debris.

Then, Proloid is chemically and biologically assayed to assure consistent metabolic activity from batch to batch. The T_4 and T_3 content of every dose is blended for optimal thyroid replacement.

Important, too, is the fact that Proloid is invariably "fresh" when your patients take it. Under proper storage conditions, its potency will not diminish for at least four years.

All of which adds up to this: the potency of Proloid is constant...for more consistent results.

PROLOID®
(thyroglobulin)

natural thyroid therapy
that leaves
nothing to chance

PHYSICIANS WANTED

If we could have managed Mr. Hood's account, he'd be out of the woods.

Robin Hood handled a lot of money over the course of his career. But he found fortune easier to acquire than to retain. And spent most of his life living on nuts and berries.

He is not a lone example. Many talented, hard working people find it easier to make money than to manage it. Security Pacific Bank's Trust Department enables such people—and their families—to attain their economic goals. No single investor, no matter how sophisticated, could provide the time, research and collective experi-

ence that goes into the building of each portfolio.

Professional investment service is not the only benefit our trusts provide. Should you become ill or incapacitated, Security Pacific Bank will continue to manage your portfolio, and at the same time apply income to medical expenses and the needs of your family. Finally, a trust with Security Pacific Bank may enable you to combine tax savings, greater family income and even a gift to your favorite charity.

Mr. Hood would approve of that.

To make an appointment, call any of our over 470 branch offices. There is no cost or obligation.

SECURITY PACIFIC BANK
SOMETHING SPECIAL

Case history #6

**Vernon's well-being
comes first.**

**Vernon's being well
comes first.**

On October 26, 1963, Vernon Bailey was working atop an oil derrick in Bakersfield when he lost his footing and fell 35 feet to the ground, suffering a spinal injury with permanent paraplegia. The hardest years of his life began.

State Compensation Insurance Fund helped the primary physician to transfer Vernon immediately to a Spinal Cord Center, where he was taught the necessary medical techniques and skills of self-care that would enable him to live as full and normal a life as possible.

For the next ten years, State Fund's rehabilitation team worked closely with Vernon and his doctors in helping to rebuild his life.

Today, although Vernon has been unable to return to work, his financial future is secure. Arrangements were made for Vernon to receive a lump-sum payment of his projected lifetime benefits, and State Fund helped him invest the money wisely.

Vernon has come a long way since 1963. His problems aren't over, but he has built himself a future—with the help of State Fund.
